DETAILED ACTION

1. This action is responsive to amendment filed 01/06/06.
2. Claims 1-18 are pending in the application.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

Claims 1, 5, the prior art does not teach a user using the computer system to convert the CAD model into a mesh model, and iteratively evaluate the mesh model until a predetermined response is generated by performing a computer-aided engineering (CAE) analysis of the mesh model; modifying a design parameter based on the CAE analysis, and updating the mesh model to include the modified design parameter by direct mesh manipulation of the mesh model using Dirichlet parameter distribution to determine deformation of the surface of the mesh model, so that the evaluation of the mesh model is used in the design of the product.

Claim 9, the prior art does not teach determining whether to vary a predetermined design parameter based on the CAE analysis; modifying the predetermined design parameter, if determined to vary the design parameter; updating the mesh model to include the modified design parameter using direct surface manipulation (DMM) of the mesh model, wherein a surface of the mesh model is described as an elastic sheet and linear elastic finite element analysis is applied to determine a displacement of the surface; and modifying the surface of the mesh model by the amount of the displacement; and using the evaluation of the mesh model in the design of the product.

Claim 12, the prior art does not teach determining whether to vary a predetermined design parameter based on the CAE analysis; modifying the predetermined design parameter, if determined to vary the design parameter; updating the mesh model to include the modified design parameter using direct surface manipulation (DMM) of the mesh model, wherein a surface of the mesh model is embedded within a lattice structure having a volume, a point within the volume is modified and finite element analysis is applied to determine a displacement of the node within a lattice; and modifying the surface of the mesh model by the amount of the displacement; and using the evaluation of the mesh model in the design of the product.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
